

Storm Protection Products

WIND LOAD-RATED GARAGE DOORS AND STORM PANELS

Severe storm defense

During a hurricane or severe storm, the structural integrity of your home can be compromised if wind forces cause the garage door to buckle. Help protect your home against the damaging effects of wind pressure during severe weather events with a wind-resistant garage door from Wayne Dalton.

All wind load options must be specified at time of order.

Wind load-rated garage doors

Wayne Dalton offers wind load reinforcement options with many of its most popular garage doors. Doors with the WindSafe logo comply with requirements of one or more approval agencies, including: the Florida Building Code, Texas Department of Insurance and Miami-Dade (FL) County.

High-grade carbon steel hinges add stability.

A combination of quick install and heavy duty jamb brackets secure track to door frame.

Top section roller slide attached to U-bar resists inward and outward force.

3" commercial grade U-bars provide horizontal stability.

Bottom section roller slide attached to U-bar resists inward and outward force.

Impact-rated garage doors

Wayne Dalton door models with the impact logo have been approved for impact resistance. Always consult with your local building authority to ensure compliance with local building code requirements.

Lose the garage door, lose the home

Post-storm analysis indicates that 80% of residential hurricane damage begins with wind entry into the garage.¹ If the integrity of your home is compromised, wind, rain and blown debris have easy access into your home.

3

With wind speeds exceeding 111 mph (Category 3 or greater hurricane), the extraordinary pressure inside the home can compromise the structural integrity of walls and roof.

4

Induced internal air pressure can reach such a magnitude that it can literally blow off the roof and tear apart wall panels.

5

Window openings as small as 4 square feet can pressurize the home's interior, exerting forces on the structure like a turbine engine.

2

Debris driven by high velocity hurricane winds become powerful projectiles that can pierce ordinary garage doors breaching their integrity.

1

High wind events can cause un-reinforced garage doors to buckle, forcing the door out of the track and causing catastrophic door failure.

¹Federal Alliance for Safe Homes (FLASH)[®] 2014.

MODEL 6600

Carriage House Steel

The Model 6600 garage door is a terrific choice for performance and value. It has excellent insulating ability that provides thermal efficiency and reduces street noise. Choose from eleven panel options.

- Distinctive Carriage House designs
- Foamed-in-place polyurethane insulation (R-value = 12.12*)

- Durable four-layer construction
- Limited Lifetime Warranty

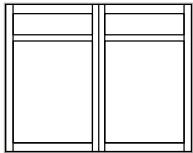

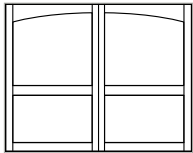

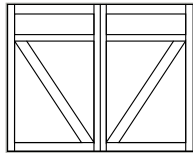

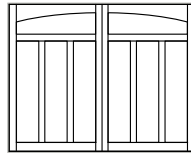

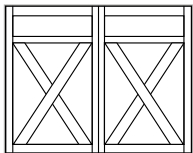

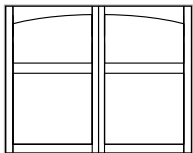

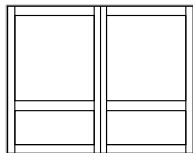

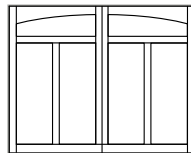

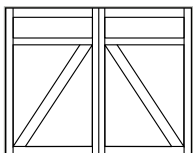

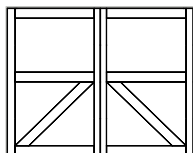

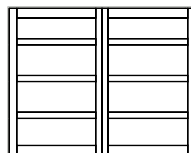

*Wayne Dalton uses a calculated door section R-value for our insulated doors.

Springfield panel, Custom painted after installation, Stockbridge windows

Wind Speed / Design Pressure Notes

1. Wind speeds based on ASCE 7-05 are applicable for enclosed structures with an importance factor of 1.0, mean roof height of 30', and assume a maximum of 2' of the door is located within the end zone of a structure. The wind speeds are listed as a guide only. Wind speed is only one of many factors that determine the design pressure on a structure. The design and location of the structure can have a great effect on the loads placed on the garage door. Consult a registered architect or structural engineer to determine what design pressure is appropriate for your application.
2. Wind speeds based on ASCE 7-10 Category II structure with a mean roof height of 30' and a maximum of 2' of the door is located within the end zone of a structure. The wind speeds are listed as a guide only. Wind speed is only one of many factors that determine the design pressure on a structure. The design and location of the structure can have a great effect on the loads placed on the garage door. Consult a registered architect or structural engineer to determine what design pressure is appropriate for your application.
3. Options available on select styles.
 - Wind load drawings available upon request.
 - Wind speeds listed in this guide are provided for reference purposes only.In **ALL** cases the local building authority is the sole and final determiner of the structural and safety requirements, and suitability of the garage door.

FABRIC-SHIELD® Storm Panels and Pull-Down Shutters

Storm Panels

Fabric-Shield® Storm Panels are a highly-effective alternative to steel or aluminum hurricane panels. These PVC coated woven fabric panels were tested and comply with the performance requirements of specification standards ASTM E-1886*, ASTM E-1996* and ASTM E-330*. Fabric-Shield® panels are easily stored and easier to deploy. Panels are also translucent allowing diffused light to enter.

*Refer to page 2 for listing of approvals.

Fabric Shield®

Pull-Down Shutters

Pull-down Shutters use Fabric-Shield® PVC-coated woven fabric in an easy-to-deploy pull down system. The low-profile shutter canisters contain each shutter when they are not in use. The pull-down shutter system is simply the fastest way to make your home storm ready.
